## The Best Advocate for Your Health...is You!

Has your health issue ever been dismissed by healthcare professionals? Have you been had family members treat you like a hypochondriac?

Have you searched for answers to health issues... and are you starting to feel hopeless?

We're here to tell you that you know your body best. Even if tests and exams haven't identified what is going on (yet!) we believe patients when they say that something isn't right.

Despite all the advancements in modern medicine that have occurred in the last 100 years, the human body still holds a lot of mysteries. This means that while medicine is indeed a science, it's also an art.

This is a struggle when we all want a diagnosis and cure that brings quick relief. Yet, many diagnoses are incredibly vague and become a blanket for various symptoms.

Don't misunderstand us: we know that modern medicine is great for a lot of situations. But often, inside-the-box protocols don't always get the big picture of what is going on with various health indicators.

Unfortunately, this leaves many people to resign themselves to years of chronic issues and a reduced quality of life.

It can be difficult to advocate for yourself or for a family member to get the care and attention you require.

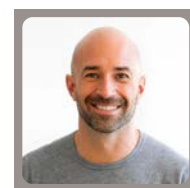

We truly believe that you're the CEO of your health, and we're dedicated to supporting you and helping you find a way to wellness.

We tend to focus on your holistic health and your overall wellness instead of chasing down individual symptoms. We don't just take a quick medical history and prescribe something. We listen and examine, dialing into what is going on under the surface so that we can address it instead of

applying "band-aid solutions."

This is where chiropractic and alternative healthcare shines for people who haven't found answers anywhere else. As our patients can tell you, this has given hope to many desperate people.

We want you and your family to experience the quality of life and vitality you dream of and return to the activities you miss! Reach out if we can answer any questions.

## DID YOU KNOW?

So many children struggling with chronic ear infections, which can lead to a host of other behavioral and developmental issues. Researchers studied over 300 children under the age of 5 under chiropractic care.

The study showed that 80% of the children had no ear infections during a 6-month period.

Fallon, JM 1997, 'The role of the chiropractic adjustment in the care and treatment of 332 children with otitis media', Journal of Clinical Chiropractic Pediatrics, vol. 2, no. 2, pp. 167-183.

## QUOTE

*"Chiropractic, like gravity, works whether you believe it or not."*

- Dr. Sid Williams

## COMMONLY ASKED QUESTION

Are chiropractors real doctors?

Yes! Chiropractors complete a post-graduate program to become a Doctor of Chiropractic.

While details vary from program to program, on average, a chiropractor completes 4,200 hours or more of coursework with topics such as chiropractic technique, biochemistry, nutrition, microbiology/bacteriology, radiography physics, normal anatomy, pathophysiology radiology, and clinical laboratory diagnosis. Chiropractors must also pass boards and be licensed for their practice area.

We want to say a huge thank you to everyone who attended our Grand Re-Opening Party! What a night!!

We are over the moon with the turnout. 2024 is going to be our best year yet!

Luc travelled all the way to Idaho, United States, for training with CPB Doctors Institute. For 3 days he was taught by world leaders in postural and spinal correction. We can't wait to show you what he learnt!

# Sciatica is a Pain in the Nerve!

If you've experienced sciatica, you know how debilitating it can be! Described as a burning pain, numbness, or tingling, sciatica can start in the low back and buttocks, traveling down the legs. It can affect people of all ages and professions, and is a common discomfort during pregnancy.

The sciatic nerve branches out from the spinal cord just above the tailbone and extends to the feet.

What causes this nerve to become irritated and painful? Sciatica can arise from factors like misaligned vertebrae, herniated discs, or an inflamed piriformis muscle.

It also doesn't pick favorites—sciatica can be triggered by various activities like intense gym sessions, lifting, pregnancy, or even shoveling snow improperly.

While traditional methods may provide temporary relief, chiropractic care stands out by addressing the root cause.

Here's how: the spinal vertebrae are stacked to be movable joints that surround and protect the spinal cord. Nerve roots exit between the bones and branch out to the rest of the body.

Because the spine and nerves are interconnected, as chiropractors, we do a thorough evaluation to see where misalignments could be causing sciatica or other issues.

We identify where there is an issue that is creating disharmony and discomfort. This may not actually be located where there is pain. For example, the alignment of the upper cervical vertebrae in your neck can have a big impact on all the vertebrae below them.

With the subluxation located, we can then give you the adjustment you need. It may take time and repetition for the body to hold itself in alignment, resolve the inflammation, and calm the nerves down.

However, we've seen many patients benefit from a neuromusculoskeletal approach.

Benefits of Chiropractic for Sciatica:

- **Natural Solutions:** Chiropractic provides a conservative plan for relief that is non-invasive and gentle, without the risks and side effects of other treatments.
- **Individualized Specificity:** There isn't a one-size-fits-all approach to sciatica. We tailor adjustments to your specific needs.

If you're especially prone to sciatica, it may be helpful to continue with check-ups to prevent the sciatic nerve from becoming irritated again.

Whether for acute sciatica or for ongoing wellness, chiropractic care addresses your biomechanics, offering a pathway to renewed nervous system function and sustained relief from sciatic discomfort.

Reach out if we can answer questions or help you with any sciatic issues.
